IIM AHMEDABAD · IGP COURSE

Interpersonal & Group Processes

The Complete Visual Study Guide

Sessions 1-13 · Skim it in 10 minutes · Master it in one read

1 Personality (Big Five)

2 Relationships, Fit & Trust

3 Networking

4 Voice & Psychological Safety

5 Negotiation

6 Conflict & Power

7 Power, Status & Influence

8 Difficult Conversations

9 Belbin Team Roles

10 Teams & Development

11 Virtual Teams & Conflict

12-13 Team Decision Making

Compiled from IGP lecture slides, Sessions 1-13

Contents

Session 1 Personality: The Big Five . . . 3
Session 2 Managing Interpersonal Relationships . . . 6
Session 3 Networking . . . 8
Session 4 Voice & Psychological Safety . . . 10
Session 5 Negotiation . . . 13
Session 6 Conflict & Power . . . 15
Session 7 Power, Status & Influence . . . 16
Session 8 Difficult Conversations . . . 18
Session 9 Team Roles: Belbin . . . 20
Session 10 Teams & Team Development . . . 23
Session 11 Virtual Teams & Conflict . . . 25
12-13 Team Decision Making . . . 26
★ One-Page Cheat Sheet . . . 28
? Self-Quiz: Test Yourself . . . 29

How to use this guide

SKIM (10 min)

- Read each **THE BIG IDEA** box
- Read each **MEMORY HOOK** box
- Glance at the coloured tables
- Finish with the Cheat Sheet

LEARN (full read)

- Go session by session
- Say each framework aloud, then cover & recall
- Link each idea to a real example from your own life
- Use ✓ / ✗ as quick strengths vs risks

RECALL (test)

- Do the self-quiz at the end
- Re-draw the Concept Map from memory
- Revisit only what you missed
- Repeat after 1 day, 3 days, 7 days

Legend

- ★ **THE BIG IDEA** – the one thing to remember from the session
- ✦ **MEMORY HOOK** – an acronym or trick to lock it in (added by me to help recall)
- ✓ / ✗ – strengths / weaknesses or do / don't
- ⚠ **WATCH OUT** – common traps or exam-style distinctions

01 Personality: The Big Five

Why people behave the way they do, and how to work with it

★ THE BIG IDEA

Personality = *"individual differences in characteristic patterns of thinking, feeling, and behaving"* (APA, 2017). It explains **preferences** for behaviour, develops early, drives everyday behaviour and is easy to observe. **Every trait is a double-edged sword**: high AND low scores each bring strengths and risks.

✦ MEMORY HOOK

OCEAN = **O**penness · **C**onscientiousness · **E**xtraversion · **A**greeableness · **N**euroticism (the slides call the model the Big Five / NEO-PI)

N Neuroticism

Propensity to experience negative emotions: anger, anxiety, worry, fear, depression, insecurity. Also called lack of "Emotional Stability". An emotional reaction, NOT a disorder.

HIGH SCORERS

STRENGTHS

- ✓ Barometer of crisis, attuned to risk
- ✓ Won't let the team slack off
- ✓ Emotional expression can motivate
- ✓ Passionate
- ✓ Responsive to feedback and coaching

WEAKNESSES

- ✗ Emotional; sadness; worry
- ✗ Burnout from stress
- ✗ Anxiety about performance
- ✗ Temperamental, easily angered
- ✗ Too responsive to feedback

LOW SCORERS

STRENGTHS

- ✓ Calm under pressure
- ✓ Resilient; bounces back from failure
- ✓ Keeps others calm in a crisis
- ✓ Even-keeled; sure of themselves
- ✓ Adventurous

WEAKNESSES

- ✗ Unresponsive to feedback
- ✗ Too self-confident / too laid back
- ✗ Calmness can lull the team into complacency

Research link: High N → poorer job performance and motivation (Judge & Ilies, 2002) - e.g. a superstar who reads mild feedback as huge criticism, spirals and calls in sick (self-fulfilling prophecy). BUT high N can mean higher performance in a busy environment or when effort is high (Smillie et al., 2006).

E Extraversion

Energy from being around others + being dominant in groups. Made of sociability, dominance, ambition, excitement seeking. Extroverts recharge with people; introverts recharge in solitude.

HIGH SCORERS

STRENGTHS

- ✓ Action oriented
- ✓ Good at networking, well informed
- ✓ Communicative
- ✓ Could be seen as a leader
- ✓ More likely seen as transparent

WEAKNESSES

- ✗ Action before reflection
- ✗ Thinking aloud confuses others
- ✗ May appear mentally muddled
- ✗ Can steamroll introverts
- ✗ Problems working solo

LOW SCORERS

STRENGTHS

- ✓ Effective listener
- ✓ Reflective (thinks before acting)
- ✓ Team player-contributor
- ✓ Good with solitary work

WEAKNESSES

- ✗ Aloof; fails to communicate
- ✗ Appears unassertive
- ✗ Difficulty motivating others
- ✗ Hard for others to read
- ✗ Misunderstood as unfriendly or arrogant

Research link: Predicts effective functioning and well-being, positive emotions - and overconfidence in task performance.

O — Openness to Experience

Interest in new / unusual things (intellect, imagination). Willingness to try new things, be vulnerable and think outside the box.

HIGH SCORERS

STRENGTHS

- ✓ Visionary and imaginative
- ✓ Strategically focused
- ✓ Drives change
- ✓ Thinks long-term
- ✓ Adaptive

WEAKNESSES

- ✗ Gives too little weight to current realities
- ✗ Indifferent to Standard Operating Procedure
- ✗ Indifferent to implementation concerns

LOW SCORERS

STRENGTHS

- ✓ Realistic and pragmatic
- ✓ Good grasp of what's happening in the organisation
- ✓ Uses factual data to forecast
- ✓ Respects time-honoured traditions

WEAKNESSES

- ✗ Too focused on the here and now
- ✗ Needs lots of data before acting (“analysis paralysis”)
- ✗ Can miss the big picture
- ✗ Stuck in formality and tradition

Research link: Linked to leadership positions, creativity & originality, broad intellectual skills (may grow with age), universalism values; negatively related to conservative political attitudes.

A — Agreeableness

“Go along to get along.” Your orientation to others: cooperation, trustfulness, compliance, affability.

HIGH SCORERS

STRENGTHS

- ✓ Strong relationship builder
- ✓ Cares about others
- ✓ Trusting and charitable
- ✓ Effective coach

WEAKNESSES

- ✗ Transparent and predictable
- ✗ Easily taken for a ride

LOW SCORERS

STRENGTHS

- ✓ Analytical and rational
- ✓ Thick-skinned
- ✓ Asks tough questions, makes tough decisions

WEAKNESSES

- ✗ Alienates people
- ✗ Conflicts; generates low trust
- ✗ Uber-competitive

Research link: Agreeable people value benevolence, tradition and conformity over power and achievement; rarely cruel or selfish. Matters in almost every arena involving other people.

C — Conscientiousness

Leading a structured, organised life; controlling impulses; duty + achievement striving. Delays gratification, works within rules, plans well.

HIGH SCORERS

STRENGTHS

- ✓ Reliable, predictable
- ✓ Delegates very well
- ✓ Lots of drive
- ✓ Good at goal setting

WEAKNESSES

- ✗ Pushes for closure; sticks with plans
- ✗ Oversimplifies complex situations
- ✗ Obsessive about control

LOW SCORERS

STRENGTHS

- ✓ Responsive to change; quick responders
- ✓ Pressure-prompted (works well in crisis)

WEAKNESSES

- ✗ Easily distracted
- ✗ Chaotic and unreliable
- ✗ Possibly untrustworthy

Research link: Linked to post-training learning, job performance and career success, and to adjustment to life's challenges - as long as it doesn't turn into exaggerated perfectionism.

Career, teams & change

Entrepreneurs vs managers

- Entrepreneurs score **higher** on Conscientiousness & Openness
- ...and **lower** on Neuroticism & Agreeableness

Team performance

- Higher **mean** Conscientiousness and higher **minimum** Agreeableness → better team performance
- Effects stronger in professional than student teams
- Lower Neuroticism helps professional teams

Does it change?

- Mostly heritable (45-60% per trait)
- Can shift with **life events** and **organisational factors**

SO WHAT? Why this matters

- Shows what feels **natural** to you and others
- Improves how you understand and **influence** others (interviews, negotiations, sales)
- Lets you move from **irritation → acceptance → complementing** each other

02 Managing Interpersonal Relationships

Responding to dissatisfaction, finding fit, and building trust

★ THE BIG IDEA

When you're unhappy at work you have four options (**EVLN**). Satisfaction and staying power depend on **fit** (with job, organisation, group, supervisor). And everything runs on **trust** = willingness to be vulnerable.

EVLN: your options when dissatisfied (Rusbult et al., 1988)

	CONSTRUCTIVE	DESTRUCTIVE
ACTIVE	**VOICE** Discuss problems, seek help, ask for feedback	**EXIT** Formally separate, move out
PASSIVE	**LOYALTY** Patiently wait and hope things improve	**NEGLECT** Ignore the relationship, spend less time, reduce effort

✦ MEMORY HOOK

EVLN - “Every Valued Leader Negotiates”. Remember the grid: **Voice** is the active-constructive one; **Neglect** is the quiet destroyer.

Managerial skills (Katz, 1974)

Level	Skill emphasis
Top manager	Mostly **strategic / conceptual** skills
Middle manager	Mostly **human** skills (a blend of all three)
Entry-level manager	Mostly **technical** skills

Do you fit? Person-Environment fit (Kristof-Brown et al., 2005)

Fit = compatibility between a person and their work environment when characteristics are well matched. Four types:

Fit type	Match between…	Job satisfaction	Intent to quit	Performance
P-Job	Person ↔ job / tasks	0.56	-0.46	0.20
P-Organisation	Person ↔ culture, climate, goals	0.44	-0.35	0.07
P-Group	Person ↔ work group (interpersonal compatibility)	0.31	-0.22	0.19
P-Supervisor	Person ↔ supervisor (dyadic relationship)	0.44	-	0.18

Read the numbers

- Numbers are correlations. Higher = stronger link with job satisfaction, bigger negative = less intent to quit.
- **P-Job fit** has the strongest links across the board.
- **P-O fit** predicts satisfaction and staying - but hardly predicts performance (0.07).
- At the **pre-entry stage** there's not enough information about the group or supervisor to judge P-G and P-S fit.

Interpersonal trust

Definition

Trust = **“the willingness of a party to be vulnerable.”** Transparent communication is the currency that builds trust on a continuous basis (Abrams, Cross, Lesser & Levin, 2003).

Level	Trust-building behaviour	What it looks like
Trustworthy behaviours	1. Act with discretion	Keep confidences; don't reveal what you aren't supposed to
	2. Be consistent between word and deed	Do what you said; be clear if you can't
	3. Ensure frequent and rich communication	Close, face-to-face (or at least phone) interactions
	4. Engage in collaborative communication	Listen, share, solve problems jointly; don't demand finished solutions
	5. Make decisions fair and transparent	Open, consistent rules so people don't hunt for hidden agendas
Organisational	6. Establish shared vision and language	Common goals and terminology; avoid misunderstanding
	7. Hold people accountable for trust	Reward trustworthy high performers; don't tolerate those who aren't
Relational	8. Create personal connections	A “human” connection beyond the task
	9. Give away something of value	Share expertise and your network generously
Individual	10. Disclose your expertise and limitations	Admit what you don't know; defer to those who do

03 Networking

Knowing and building relationships with others

★ THE BIG IDEA

A network is a **pattern of informal social ties**. **The pattern matters**, not just the number. Dense networks give trust and comfort; sparse, diverse networks give new information, creativity and informal power.

Two kinds of network: which one, when?

NETWORK A: dense, cliquey

- **Low diversity, high redundancy, no brokerage**
- Trust
- Back-up talent
- Speed to consensus
- Emotional support, comfort
- Promotes cohesion

NETWORK B: sparse, bridging

- **High diversity, low redundancy, brokerage**
- Diverse information
- Diverse talent
- Fosters creativity
- Informal power
- Promotes competition

Ask yourself

- How many of your friends are friends of each other? If nearly all → you may be in an **echo chamber** (beliefs reinforced in a closed system).
- A **broker** sits between groups that don't otherwise connect, and so controls the flow of information.

✦ MEMORY HOOK

A = Acquaintances stay Alike (cosy, redundant). **B = Bridges, Brokers, Breakthroughs.**

What is a social network?

- A pattern of informal social ties - from casual acquaintance to close bonds.
- Assumptions: shift from individuals → **relationships**; business and friendship overlap (**embeddedness**); networks have **economic benefits**; the **pattern of ties** matters.

Degree centrality

- Number of connections you have (one-way or reciprocal)
- **More connections = higher degree**

Betweenness centrality

- Extent to which you lie on the shortest path between other pairs of people
- Connected to people who are **not connected to each other**
- **High betweenness = broker**

Four ways we build a network

Principle	Idea	Why we do it	Limitations
1. Referral	Our current network introduces us to new people	Easy, trusted introductions	Stays within the same circle
2. Self-similarity	Pick ties with similar backgrounds, training, thinking	**T**rust · **C**omfort zone · **U**tility in mind · **S**elf-affirmation · **J**oy of spontaneous agreement	Little discrepant information; stifles problem solving and creativity; **echo chambers**
3. Proximity	Pick ties in the same department, unit or team	Frequency of contact; we organise things by distance	Echo chambers; your network becomes **structurally equivalent** to others like you → less differentiation

Principle	Idea	Why we do it	Limitations
4. Shared activity	Cross-section of different people around a common interest	Focus is on the **activity**, not on background commonalities	(Best option, see below)

Shared activity: the best way to build a brokerage network (Uzzi & Dunlap, 2005)

- **3 properties to maximise it: Passion** (busy people make time for passions) · **Interdependence** (need at least two people) · **Stakes** (something to win or lose)
- **Why it works:** Diversity (mixed people, one activity) + Trust (common goals, seeing each other's character, celebrating victory and commiserating over defeat) + Brokerage (meet people with contacts in new circles)
- **Examples:** team or partner sports, community service, cross-functional teams, volunteer groups

✦ MEMORY HOOK

Shared activity works because of **P-I-S**: **P**assion, **I**nterdependence, **S**takes.

Myths & reality about networking

Common (wrong) view	Reality
“Networking is for the incompetent / unethical / manipulative / game players”; “my brilliance will be noticed anyway”; “no time”; “I'm shy or introverted”	Networking is a skill for **relational fitness**, like exercise is for physical fitness (Kuwabara, 2013).
“The bigger the network the better” (self-help books, podcasts)	It's **quality, not quantity**. Most social-media “friends” you barely interact with; a large part of networking is a waste of time (McKeown, 2015).
“I can maintain unlimited relationships”	**Dunbar's number ≈ 150**: we can sustain only a limited number of stable relationships.

Practical suggestions

- Networking is about **relationship initiation**, not LinkedIn mechanics. Invest time, energy and resources in social ties.
- Build a **diversified portfolio**: a mix of **redundant ties** (support and trust) and **entrepreneurial ties** (information and control). Include “undervalued” people.
- Expand through **shared activities** (try something different); use and become a **broker**; become a resource broker and make yourself **non-substitutable**.
- **Maintain** your network; be generous with resources to build trust and credibility; link your goals to organisational goals.

04 Voice & Psychological Safety

Why people stay silent, and what it can cost

★ THE BIG IDEA

Voice = informal, discretionary communication of ideas, suggestions, concerns or opinions about work, to someone who can act, with the intent to bring improvement or change (Morrison, 2014). People stay silent mainly from **Fear** and **Futility**. **Psychological safety** is the antidote.

✦ MEMORY HOOK

Silence = **2 F's: Fear + Futility**. And remember: **Voice ≠ Agency** (speaking up isn't the same as taking control).

Risks of speaking up & the two main reasons for silence

Risks people take	FEAR	FUTILITY
• Looking ignorant (asking for help) • Looking incompetent • Seen as intrusive • Seen as negative	• Stalled promotion / transfer • Not getting rewards • Negative actions by supervisors • Being made fun of by team • Looking incompetent • Labelled a problem creator	• "My suggestions will never be implemented" • "Nobody listens here anyway" • "I'll never know what gets implemented"

What pushes people to speak up or stay quiet? (Morrison, 2014)

Category	Motivators (speak up)	Inhibitors (stay silent)
Individual disposition	Extraversion, Conscientiousness	Achievement orientation
Job & organisation perceptions	Organisational identification, job satisfaction, organisational support	Detachment, powerlessness
Emotions	Anger, psychological safety	Fear, futility, image or career risks
Supervisor behaviour	Ethical leadership, transformational leadership, consultation	Abusive leadership
Context	Caring climate, formal voice mechanisms	Job and social stressors, hierarchical structure, climate of fear or silence

Psychological safety

Definition

A **shared belief** among team members that it's OK to **take risks, express ideas and concerns, speak up with questions and admit mistakes** - without fear of negative consequences.

Speak-up cycle (leaders open)

- Leaders show openness to feedback, suggestions, concerns
- Psychological safety grows
- People speak up → better decisions, trust, outcomes

Silence cycle (leaders defensive)

- Leaders react defensively to feedback
- No psychological safety
- People stay silent → problems hidden, poorer outcomes

Benefits of psychological safety

- More information sharing · higher job satisfaction & happiness · supports learning behaviours
- Boosts performance & profitability · engagement & commitment · diverse, inclusive culture
- Creativity & innovation · lower turnover · better reputation & brand · positive work relationships

Case: Air India Express (AIXL) and the “last line of defence”

ANTECEDENTS	TEAM BELIEF	BEHAVIOUR	OUTCOME
Leader behaviour, team structures, context support **AIXL:** authoritarian captains unchecked; fragmented leadership across four cities; no coaching	“Is it safe to speak up here?” **AIXL:** stiff, closed environment; challenging a captain seen as disruptive	Learning behaviour: questions, error discussion, challenge **AXB 1344:** no briefing for Runway 10; hedged call-outs; controls never taken	Team performance **The overrun and 21 lives**

> ⚠ **Implication**
> Training first officers to “be assertive” **cannot work** while the antecedent conditions (authoritarian culture, no coaching) stay untouched.

Having voice ≠ having agency (the escalation ladder)

Step	What the first officer says	Type	Verbal risk
1	“Rate of descent”	Technical call-out	Low
2	“Rate of descent… Captain”	Personalised challenge	Moderate
3	“Just check it”	Hedged request	Moderate
4	“Captain?”	A plea	High
5	“Go around”	Direct command	Highest
6	Physically executing the go-around	TAKING CONTROL (authorised and required by SOP)	**Never taken**

> **Key insight**
> The first officer had enough psychological safety to **speak**, but not enough to **act**. The gap between the two thresholds is where 190 lives were at stake.

Why nothing changed: single-loop vs double-loop learning

SINGLE-LOOP

- Fix the error **inside** existing assumptions
- Detect deviation → correct → move on
- Goals & norms never questioned
- AIXL after Mangalore: manuals revised, reports filed, action items closed
- When flagged for cutting SMS training from 5 to 3 days, AIXL amended the manual to legitimise the cut

DOUBLE-LOOP

- **Question the assumptions** that produced the error
- Why does our culture subordinate safety to operations?
- Why do authority gradients persist despite CRM training?
- Why has compliance paperwork become a substitute for change?
- **Never asked at AIXL → same failure recurred**

> **Espoused theory vs theory-in-use**
> **Espoused** (what they say): safety first, SMS manuals, CRM syllabi. **In use** (what they do, revealed by the investigation): prioritised operations, tolerated deviation, suppressed dissent. It produced documentation, not change.

Why organisations don't learn (HBR, 2015) and how to fix it

Bias towards…	Fix
Success	Destigmatise failure · growth mindset · consider potential · use data-driven decisions
Action	Build breaks · take time to think · encourage reflection
Fitting in	Cultivate strengths · remove conformity · lead by example
Experts	Let employees own the problems that affect them · give varied experience · empower them to use their experience

Psychological safety × accountability

	LOW motivation & accountability	HIGH motivation & accountability
HIGH psych. safety	**COMFORT ZONE** Safe but little drive	**LEARNING ZONE ★** Safe + driven: the goal
LOW psych. safety	**APATHY ZONE** Disengaged	**ANXIETY ZONE** Pressure without safety

05 Negotiation

Getting what you want when parties are interdependent

★ THE BIG IDEA

Negotiation = an interpersonal decision-making process when you **can't achieve your objectives alone** (Thompson et al., 2010): parties exchange goods, services or even intangibles and try to agree on the 'exchange rate' (Robbins et al., 2017). Win more by **negotiating interests, not positions** and by **adding issues**.

Negotiation overview

- **Know yourself** (needs, wants, goals)
- **Know others** (their needs, wants, goals)
- **Know the situation** (deal / no deal, distributive / integrative, conflict)

Three building blocks (example: Maya and Prof. Das negotiating software price)

ISSUE	POSITION	INTEREST
• **What** is being negotiated? • The topic or dimension to agree on • e.g. the **price** of the software	• What people **say** they want • Stance on an issue • e.g. Maya: "I want INR 12,00,000 for a subscription"	• **Why** they want it • Underlying concerns • e.g. Maya: needs a prestigious client like SOM for credibility and visibility

✦ MEMORY HOOK

I-P-I: Issue = **what** · Position = **says** · Interest = **why**. Great deals hide in the *why*.

Dual concern model: your style depends on two concerns

	LOW concern for own outcome	HIGH concern for own outcome
HIGH concern for others' outcome	**ACCOMMODATION** Give in to keep the peace	**COLLABORATION** Both win: problem solve
LOW concern for others' outcome	**AVOIDANCE** Sidestep it	**COMPETITION** I win, you lose

Distributive vs integrative

	Distributive	Integrative
Goal	Get as much of the pie as possible	Expand the pie so everyone is satisfied
Motivation	Win-lose	Win-win
Focus	Positions	Interests
Information sharing	Low	High
Time focus	Short term	Long term

Add issues to create value

- **Single issue** (price only) → limited solutions, little room for creativity.
- **Multiple issues** (price, timeline, risk, payment terms, support, future business) → many possible packages.
- **Issues help create possibilities. Priorities help create value:** if two sides value the same issues differently, integrative deals emerge.

How to trade issues

Importance to me	Importance to them	What to do
Low	High	**Concede strategically**
High	Low	**Protect; seek compensation**
High	High	**Negotiate carefully**
Low	Low	**Settle quickly**

Steps of negotiating

Prepare | **Influence** | **Signal** | **Propose** | **Exchange offers** | **Close** | **(Dis)agree**

Prepare: the information you need

About YOU

- What you want vs what you **really need**
- What you'd sacrifice in exchange
- Your priorities
- Your pressures and limits: **economic, time, legal**

About THEM

- Their needs and wants
- What they might sacrifice
- Their pressures and constraints

About BOTH

- Common issues: objectives, constraints
- Likely points of conflict
- How much leeway you'll allow yourself
- How you'll resolve conflict points

Common negotiating mistakes: avoid these

Before & during

- Inadequate preparation
- Not trying to problem-solve
- Not listening (tone, key issues, others' signals)
- Using authority / pulling rank / browbeating
- Letting **price** dominate other interests

Behaviour & ending

- Scoring points for personal satisfaction
- Being aggressive, arguing
- Ignoring conflict
- Impatience
- Failing to end on a positive note
- Neglecting the other side's concerns
- Partisan perceptions (we're 'morally upright', they're 'villains')

Tricky tactics & how to counter them

Tactic	Counter
Phony facts (deliberate deception)	Cross-check facts independently
Ambiguous authority (after you agree, "my boss must approve")	Find out who has authority before you start; insist on reciprocity (neither side committed to the draft)
Good guy / bad guy (two on one side stage a quarrel)	Recognise the psychological manipulation; ask for reasons
Stressful setting designed to rush you	Say so; suggest changing places, taking a break, adjourning to another time or place

06 Conflict & Power

Why conflict arises and where power comes from

★ THE BIG IDEA

Conflict, power and politics are **natural outcomes of organising**. **Power = the potential ability to influence the behaviour of others** (potential, because you may choose not to use it).

Case: "Strike in Space" (Skylab, August 1973)

- Astronauts Carr, Gibson and Pogue were scheduled too ambitiously. Mission Control later admitted: *"the scheduling was too ambitious."*
- Carr called it the **"first sensitivity session" in space**. Pogue: *"We were bound by a common enemy: Mission Control."*
- Lesson: pressure from goals, workload and resources creates conflict, and a common challenge can bind a team together.

Antecedents of conflict: why does it arise?

Goal incompatibility	Differentiation	Task interdependence	Limited resources
Parties want different outcomes	Different roles, backgrounds, views	Need each other to get work done	Not enough to go round

✦ MEMORY HOOK

G-D-T-L: **G**oals clash, **D**ifferences, **T**ied-together tasks, **L**imited stuff.

Sources of power (French & Raven, 1959)

POSITIONAL / FORMAL power: from your position

- **Coercive**: fear of negative results for not complying (sanctions, force)
- **Reward**: ability to give things others value: pay, raises, bonuses; recognition, promotions, interesting work
- **Legitimate**: formal authority to control and use organisational resources via structural position

PERSONAL power: from who you are

- **Expert**: expertise, special skill or knowledge
- **Referent**: others identify with you or your desirable traits/resources
- **Information**: you hold knowledge others need
- **Relational / network**: strong relationships across departments and units; becoming central (Soga et al., 2022)

✦ MEMORY HOOK

Positional = **C-R-L** (**C**oercive, **R**eward, **L**egitimate). Personal = **E-R-I-R** (**E**xpert, **R**eferent, **I**nformation, **R**elational).

Key takeaways

- Conflict and power exist in all interpersonal relations.
- **Combinations** of different sources make people powerful or powerless.
- Managers should **enhance collaboration** to reduce conflict.

07 Power, Status & Influence

The levers you can pull and the tactics you can use

★ THE BIG IDEA

You have three levers: **Power**, **Status** and **Tactics**. None is good or bad by itself. It's the **outcome you want** that makes using it positive or negative.

11 influence tactics (Kipnis et al., 1980; Lee et al., 2017)

Tactic	What it is	Tactic	What it is
Rationality	Data and information to build a logical argument	Ingratiation	Winning over with flattery or compliments
Exchange	Offering to do something in return for compliance	Consultation	Seeking participation in an activity you want support for
Inspirational appeal	Appeal to values, ideals; boost target's confidence	Personal appeals	Appeal to friendship or loyalty
Pressure	Demands, threats, continual checking	Apprising	Explain how support brings personal career benefits
Legitimating	Establish appropriateness / verify authority	Collaboration	Provide resources if the person will carry out the request
Coalitions	Seek help from others to influence the target		

✦ MEMORY HOOK

Three groups: **Logic & trade** (rationality, exchange, apprising, collaboration) · **Heart & values** (inspirational, personal, ingratiation, consultation) · **Force & backing** (pressure, legitimating, coalitions).

Status: “How highly are you regarded?”

Why it matters

- Nobel economist John Harsanyi: apart from economic payoffs, **social status** may be the most important incentive and motivating force of social behaviour.
- **Status** = the extent to which an individual or group is respected, regarded or admired by others.
- Race, class and gender interplay with status; status **can shift**; individual and societal relations reinforce competence beliefs.

RESPECT

- From key attributes and accomplishments that others value

PROMINENCE

- How much you stand out and get attention compared with others

PRESTIGE

- Personal and position-based “deference”; based on competence, commitment, leadership; seen as distinguished

✦ MEMORY HOOK

Status = **R-P-P**: **R**espect (valued achievements), **P**rominence (attention), **P**restige (deference).

Push vs Pull: two ways to play status

PUSH: raise MY status relative to others	PULL: elevate OTHERS' status
• Asserting dominance • Competing • Exclusions • Criticism	• Collaboration • Supporting • Inclusion • Complimenting • Listening and following up

Key takeaways

- Each of us has **multiple levers** to influence.
- It's your **willingness to use** status or power that makes you powerful or powerless.
- Power, status and tactics are neutral; **outcomes** decide whether they're positive or negative.

08 Difficult Conversations

Disagree better: stay receptive, keep talking

★ THE BIG IDEA

Trying to win an argument is a good way to start a fight. A **constructive disagreement** is any disagreement that **increases willingness to talk to each other again**. The tool: **receptiveness** (Minson, 2026).

Before the conversation

What happened?	Emotions	What's at stake?	Your purpose	Raise it at all?
Your story and theirs	Understand them (yours and theirs)	Consequences of acting or not	Check why you want this talk	Decide whether it's worth it

Naive realism: "What's wrong with everyone?"

⚠ The trap

- Most people believe they're accurate and objective and rarely consider how their context distorts their views.
- We assume the other side disagrees because of **lack of information or intelligence**.
- Persuading is a losing battle. Instead ask: **what might I be missing?** and **how could a smart, reasonable, kind person see this differently?**

Receptiveness: the solution

- **Definition:** willingness to access, consider and evaluate supporting *and* opposing views impartially.
- Receptive people put themselves in the presence of opposing ideas, pay attention to the arguments and apply the **same scrutiny** as to their own side.
- **4 components:** emotional equanimity · intellectual curiosity · respect towards opponents · tolerance of taboo issues.
- **It is NOT** about compromising or changing your mind.

The Listening Triangle (show receptiveness)

1. ASK a question	2. LISTEN to the answer	3. ACKNOWLEDGE & REFLECT
Signal your goal is to learn and understand their perspective	We often assume we understand others even when we don't	Make them feel understood. Practise on trivial topics first

HEAR framework: communicate receptiveness

H: Hedge your claims	E: Emphasise agreement	A: Acknowledge other perspectives	R: Reframe to the positive
"I think it's possible that..." "This might happen because..." "Some people tend to think..."	"I think we both want to..." "I agree with some of what you're saying" "We are both concerned with..."	"I understand that..." "I see your point" "What I think you are saying is..."	"I think it's great when..." "I really appreciate it when..." "It would be so wonderful if..."

✦ MEMORY HOOK

HEAR the other side: **H**edge · **E**mphasise agreement · **A**cknowledge · **R**eframe positive.

During the conversation

- Stay focused on your goals; use the listening triangle and HEAR.
- **Avoid explanatory words** (e.g. “because…” can sound like lecturing).
- Share the **personal stories** that led to your belief; tell your own experiences and convictions.
- Show a little **vulnerability**: it doesn't sound like bragging or lecturing.

Ways to build receptiveness over time

- Be around receptive people; bring in more of them and incentivise effort.
- Create processes that build good habits and reduce future disagreement.
- Start early in life.
- Use AI coaches: no risk of real conflict, and your counterpart can argue any side with equal facility.

09 Team Roles: Belbin

Nine team roles, each with a strength and a 'characteristic weakness'

★ THE BIG IDEA

A **team role** = *"a tendency to behave, contribute and interrelate with others in a particular way."* Belbin has **9 roles** in 3 families. Each has a **strength**, an **allowable weakness** (tolerable, manage it) and a **non-allowable weakness** (never OK).

✦ MEMORY HOOK

People roles = relate (CO, TW, RI). **Thinking** roles = ideas (PL, ME, SP). **Action** roles = get it done (SH, IM, CF).

PEOPLE-oriented roles

CO — Co-ordinator

People · brings order

ROLE
Control and organise team activities; make best use of resources

AS A PERSON
Mature, calm, self-confident, listens well, fair-minded, quietly charismatic

CONTRIBUTES
- ✓ Clarifies goals
- ✓ Promotes effective decision making
- ✓ Good chairperson
- ✓ Delegates well

ALLOWABLE weakness
- ~ Delegates personal work
- ~ Can be seen as manipulative

NON-ALLOWABLE
- ✗ Takes personal credit for team effort
- ✗ Inclination to be lazy

TW — Team Worker

People · supports diplomatically

ROLE
Help members achieve team effectiveness

AS A PERSON
Social, mild, likeable, sensitive, perceptive

CONTRIBUTES
- ✓ Counsellor and conciliator
- ✓ Improves intra-group communication
- ✓ Diffuses conflict
- ✓ Builds on suggestions

ALLOWABLE weakness
- ~ Indecisive
- ~ Ostentatious behaviour
- ~ Competing for status

NON-ALLOWABLE
- ✗ Avoids pressure situations
- ✗ Never gives their opinion

RI — Resource Investigator

People · develops outside contacts

ROLE
Explore outside resources; develop helpful contacts

AS A PERSON
Enthusiastic, extrovert, communicative, curious, works well under pressure

CONTRIBUTES
- ✓ Makes and develops new contacts
- ✓ Explores new opportunities
- ✓ 'Fixer'

ALLOWABLE weakness
- ~ Takes it easy when pressure is off
- ~ Rapid loss of interest
- ~ Over-optimistic
- ~ Poor follow-through

NON-ALLOWABLE
- ✗ Neglects follow-up arrangements
- ✗ Letting down people

THINKING-oriented roles

PL — Plant
Thinking · innovative solutions

ROLE
Prime source of ideas and innovation for the team

AS A PERSON
Individualistic, intellectual, serious-minded, unorthodox, creative

CONTRIBUTES
- ✓ Brings creative ideas
- ✓ Adds imagination
- ✓ Focuses on major strategic issues

ALLOWABLE weakness
- ~ 'Up in the clouds'
- ~ Ignores practical details and goals
- ~ Often feels frustrated

NON-ALLOWABLE
- ✗ Strong personal ownership of ideas
- ✗ Looks down on others
- ✗ Impatient with 'the other'

ME — Monitor Evaluator
Thinking · assesses critically

ROLE
Analyse ideas from inside and outside the team; judge feasibility vs objectives

AS A PERSON
Sober, strategic, critical, skeptical, slow but steady

CONTRIBUTES
- ✓ Sees and judges a range of options
- ✓ Critical thinking
- ✓ Develops ideas to fruition
- ✓ Stops unsound ideas

ALLOWABLE weakness
- ~ Lacks drive and ability to inspire
- ~ Overly critical
- ~ 'Punch-up' with plants
- ~ Cynicism

NON-ALLOWABLE
- ✗ Constant harsh criticism
- ✗ Ignores feelings
- ✗ Stopping progress of team

SP — Specialist
Thinking · expert in a subject

ROLE
Subject-matter expert; advise and consult the group

AS A PERSON
Conscientious, curious, able to concentrate, loner

CONTRIBUTES
- ✓ 'The expert'
- ✓ Single-minded, self-starting, dedicated
- ✓ Provides scarce knowledge and skills

ALLOWABLE weakness
- ~ Focuses too much on technical detail
- ~ Too theoretical; little link to the big picture

NON-ALLOWABLE
- ✗ Won't get involved in broader team issues
- ✗ "Not my problem" syndrome

ACTION-oriented roles

SH — Shaper
Action · questions assumptions

ROLE
Give shape and form to the team's activities

AS A PERSON
Outgoing, dynamic, challenging, drive and courage, self-confident

CONTRIBUTES
- ✓ Direction in discussions
- ✓ Objective setting
- ✓ Challenges inertia and complacency
- ✓ Leadership

ALLOWABLE weakness
- ~ Argumentative, provocative
- ~ Not always likeable
- ~ Prone to irritation

NON-ALLOWABLE
- ✗ Consistently tramples on feelings
- ✗ Can't recover with humour or apology
- ✗ Bullying

IM — Implementer
Action · brings self-discipline

ROLE
Turn concepts and plans into a practical working brief and carry it out systematically

AS A PERSON
Disciplined, reliable, conservative, hard-working, predictable, methodical

CONTRIBUTES
- ✓ Organising
- ✓ Dealing with practical details
- ✓ Turns strategies into actions
- ✓ The 'workhorse'

ALLOWABLE weakness
- ~ Inflexible, unresponsive to new ideas
- ~ Unconstructive criticism

NON-ALLOWABLE
- ✗ Obstructs change
- ✗ Unwilling to adapt

CF — Completer-Finisher

Action · catches the details

ROLE

Make sure the team's efforts are near perfect and nothing is overlooked

AS A PERSON

Conscientious, orderly, anxious, painstaking

CONTRIBUTES

- ✓ Following through
- ✓ Quality control, attention to detail
- ✓ Sense of urgency
- ✓ Stops omissions

ALLOWABLE weakness

- ~ Worries too much
- ~ Perfectionism
- ~ Loses sight of overall plan
- ~ Reluctant to delegate

NON-ALLOWABLE

- ✗ Negative thinking
- ✗ Obsessive behaviour
- ✗ Rushes the planning stage
- ✗ Focuses on small mistakes in a demotivating way

Using roles well

Your three categories

- **Natural / preferred** roles
- **Manageable** roles
- **Least preferred** roles

What role do I play?

- Play to your preferred roles when possible
- Pick the one best suited to the setting, tasks and people
- Sometimes **flex or stretch** beyond your top 3
- Let others fill your weakest roles

⚠ Unbalanced teams

- Similar **weaknesses** → the whole team shares that weakness.
- Similar **strengths** → members **compete** instead of cooperating for the same tasks.
- **Too many Plants** = all brainstorming, no action · **Too many Monitor Evaluators** = analysis paralysis · **Too many Shapers** = conflict!

Manage your allowable weakness

- Forewarned is forearmed: e.g. a Shaper will likely hurt feelings as the team charges ahead.
- Don't let an allowable weakness become non-allowable: a Plant who zones out in a meeting is **OK**; a Plant who forgets to come to the meeting is **NOT OK**.

Cautions

- Be aware of roles you naturally assume; ask which needed roles are missing and mindfully fill the gap.
- Beware of **labelling people**: everyone can perform and switch between about **4-6 roles**.
- Use with caution: having all roles present does **not guarantee** a quality outcome.

10 Teams & Team Development

What a team is, how it has changed, and how it evolves

★ THE BIG IDEA

A team is more than a group: members **interact**, share **goals**, are **interdependent** and have **different roles**. Teams today are fluid and virtual. They develop through **Forming → Storming → Norming → Performing → Adjourning**, or in bursts (punctuated equilibrium).

Team definition (Mathieu et al., 2019): seven parts

	A team is… (all seven must hold)
a	**Two or more individuals**
b	**Socially interact** (face-to-face or, increasingly, virtually)
c	Possess one or more **common goals**
d	Are brought together to perform **organisationally relevant tasks**
e	Exhibit **interdependencies** in workflow, goals and outcomes
f	Have **different roles and responsibilities**
g	Are embedded in an organisational system, with boundaries and linkages to the broader context and task environment

✦ MEMORY HOOK

Think **S-C-D-I-R-E**: **S**ocial interaction · **C**ommon goals · **D**oing org-relevant tasks · **I**nterdependent · **R**oles differ · **E**mbedded in the organisation.

Teams then vs teams now (Tannenbaum et al., 2011)

Teams THEN	Teams NOW
Stable membership	Fluid membership
Single membership	Multiple membership
Shared common goals	Swift teams
Defined roles	Virtual location
Common location	Ambiguous tasks and responsibilities
Defined tasks	

Tuckman's stages of team development (team life cycle)

FORMING	STORMING	NORMING	PERFORMING	ADJOURNING
Team first comes together Orientation phase Get acquainted; understand skill sets Discuss goals, roles, ground rules, timelines	Conflicts emerge (personality, working style) Danger of factions and cliques Some feel left out or isolated	Norms of behaviour develop Idiosyncrasies accepted Feeling of 'group'; cohesion grows	High cohesion and trust Better efficiency and performance Clear strategies for resolving issues	Task completed; team breaks up Anxiety, fear of future, sadness Leaders evaluate team and lessons learnt

✦ MEMORY HOOK

F-S-N-P-A = "Form, Storm, Norm, Perform, Adjourn". **Storming** is where conflict peaks; **Performing** is where trust and efficiency peak.

Punctuated Equilibrium Model (Gersick, 1988/1991)

The alternative to a step-by-step model

- Groups stay **static for long periods**: change is incremental.
- **Revolutionary change** happens in brief, punctuated bursts. Groups cycle between storming and performing.
- **Transitional windows** = opportunities for innovation and creativity.

Group evolution (Tuckman)	Punctuated equilibrium (Gersick)
Linear sequence of stages	Long stability + sudden bursts of change
Predictable path through 5 stages	Change clusters in transition windows

11 Virtual Teams & Conflict

Distance, trust and the four types of conflict

★ THE BIG IDEA

A **virtual team** (geographically dispersed) works across **time, space and organisational boundaries**, linked by communication technology. Distance cuts communication (Allen curve) and raises issues of trust, conflict, accountability, skills and communication. **Not all conflict is bad**: it depends on the type.

Distance & communication (Allen curve)

NEXT DOOR	SAME AISLE	DIFFERENT FLOOR / GLOBE
Likely to communicate weekly	Rare to communicate weekly	Slim chance of communicating weekly

Allen curve

MIT Professor Thomas Allen (1970s): the **farther apart** people sit, the **less they communicate** - sharply. Technology helps, but people are creatures of habit; physical separation still makes sharing information harder.

Virtual team issues (Monalisa et al., 2008)

Trust · **C**onflict · **A**ccountability · **S**kills · **C**ommunication

What is conflict? Four types (Gallo, 2017: HBR Guide)

Conflicts are disagreements or frictions between individuals or teams at work.

TASK: "What?"

- Disagreement over the **goal** of the task
- Agenda for a staff meeting
- How to define or measure success
- Revenue vs customer satisfaction?
- Customers or employees first?
- **+ Better decision quality and commitment**

RELATIONSHIP: "Who? Ouch!"

- Clash of personalities; feeling disrespected or hurt
- Snapping at each other in meetings
- Snarky emails
- Interrupting or talking over a colleague
- Arguing over who's right
- **− Hurts decision quality, satisfaction, commitment**

STATUS: "Who's boss?"

- Disputes over position in the social hierarchy; who deserves credit
- Competing to run a high-profile project
- Dominating shared resources
- Fighting for status symbols
- Jockeying for leadership (no formal leader)
- **− Hurts performance**

PROCESS: "How?"

- Disagreement over the **means** to reach the goal
- How to roll out a new HR policy
- How decisions are made in a meeting
- How fast to finish
- Who to consult and include
- **− Hurts performance**

✦ MEMORY HOOK

T-R-S-P = **T**ask (what) · **R**elationship (who/feelings) · **S**tatus (hierarchy) · **P**rocess (how). Only **Task** conflict is linked to *better* decisions, so keep it about the work, not the people.

Sources on the slides

Task: Amason (1996), Parayitam & Dooley (2007) · Relationship: Amason (1996), Jehn & Mannix (2001) · Status: Bendersky & Hays (2012) · Process: Jehn & Mannix (2001) · Overview: De Wit, Greer & Jehn (2012) meta-analysis.

12-13 Team Decision Making

Beating process losses to create synergy

★ THE BIG IDEA

Actual productivity = Potential productivity − Process losses. **Synergy** = the team does *better than any individual on it*. Leaders should **increase synergy** and **reduce process losses**.

POTENTIAL productivity	−	PROCESS LOSSES	=	ACTUAL productivity	+	SYNERGY ★

Process losses: four warning signals

1. CONFORMITY

- **Groupthink**: overlooking problems in the pursuit of consensus
- **Abilene paradox**: making a decision nobody individually believes in because no one wants to 'rock the boat'; not voicing concerns even though you know it's wrong or risky

2. PARTICIPATION

- Who contributes, and why? (age, experience, competence, style)
- Consequences of uneven participation
- **Social loafing**: less effort in groups (esp. if you think others slack)
- **Bystander effect**: diffusion of responsibility

3. DECISION BIASES

- **Common knowledge effect**: spending time on what everyone already knows instead of unique knowledge

4. CONFLICT

- Whose voice is heard or ignored?
- Rivalries; permanent supporters or contradictors
- Always-disagreers
- **Creative abrasion** (good) vs **personal abrasion** (bad)

✦ MEMORY HOOK

C-P-D-C: **C**onformity · **P**articipation · **D**ecision biases · **C**onflict. Think of the Abilene Paradox as "Nobody wanted to go, but everybody went."

Beating the common knowledge effect

- Set up the right **process, structure, norms and goals**.
- Find who knows what: *"What do you know about this that I don't?"*
- **Suspend initial judgement**; wait for evidence.
- Don't rely solely on majority rule.
- Redirect discussion to **unshared information**: *"I heard you say something earlier I didn't know; we haven't fully discussed it."*
- Include someone who explicitly signals differences.

Decision rules

Majority rule	Minority rule	Voting	Consensus	Qualified consensus

Reducing process losses

Decrease process losses	Other solutions	Where synergy comes from
• Spend early time on **goals, rules, responsibilities** • Develop **decision rules** • **Group monitoring** • **Expert identification** • Appropriate use of **conflict**	• **Contracts** • **Build trust** through shared activities and self-disclosure	• **Information integration** from diverse views • **Buy-in**: more motivational pull • **De-biasing**

Future of teams: shifting boundaries (Mortensen & Haas, 2018)

FLUID	OVERLAP	DISPERSION
Members change over time with work demands	Members work on **multiple teams** at once	Geographically or organisationally **dispersed**

One-Page Cheat Sheet

Every framework in one glance. Read this the night before.

#	Topic	Remember
1	Big Five	**OCEAN**: Openness, Conscientiousness, Extraversion, Agreeableness, Neuroticism. Each has strengths AND risks at both ends
2	EVLN	Exit, Voice, Loyalty, Neglect (active-passive × constructive-destructive). 4 fits: P-Job, P-Org, P-Group, P-Supervisor. Trust = willingness to be vulnerable
3	Networks	A = dense, trust, echo chamber · B = diverse, brokerage, creativity. Build via referral, self-similarity, proximity, **shared activity** (Passion, Interdependence, Stakes). Quality > quantity; Dunbar ≈ 150
4	Voice	Silence = **Fear + Futility**. Psych safety = OK to take risks and admit mistakes. Voice ≠ agency. Single-loop fixes errors, double-loop questions assumptions
5	Negotiation	Issue / Position / Interest. Dual concern: accommodate, collaborate, avoid, compete. Distributive (win-lose) vs integrative (win-win). 7 steps: Prepare → (Dis)agree
6	Power	Conflict antecedents: goals, differentiation, interdependence, scarce resources. Positional: coercive, reward, legitimate. Personal: expert, referent, information, relational
7	Influence	Levers: power, status, tactics. Status = respect, prominence, prestige. Push (dominate) vs Pull (elevate). 11 tactics (rationality … collaboration)
8	Difficult talks	Naive realism. Receptiveness. Listening triangle (ask, listen, reflect). **HEAR**: Hedge, Emphasise agreement, Acknowledge, Reframe positive
9	Belbin	People: CO, TW, RI · Thinking: PL, ME, SP · Action: SH, IM, CF. Allowable vs non-allowable weakness. Too many Plants / MEs / Shapers → trouble
10	Team stages	Forming, Storming, Norming, Performing, Adjourning. Punctuated equilibrium = long calm + bursts of change
11	Conflict types	**Task** (what, helps decisions) · Relationship (who) · Status (who's boss) · Process (how). Allen curve: distance kills communication
12-13	Decisions	Actual = Potential − Process losses. Losses: conformity (groupthink, Abilene), participation (loafing, bystander), biases (common knowledge), conflict. Synergy = diverse info + buy-in + de-biasing

Concept map: how the sessions connect

SELF	RELATIONSHIPS	NETWORKS	VOICE	NEGOTIATE	POWER & INFLUENCE	DISAGREE WELL	TEAMS
S1 Personality	S2 EVLN, fit, trust	S3 Ties & brokers	S4 Safety to speak	S5 Interests & packages	S6-7 Sources & levers	S8 Receptiveness	S9-13 Roles, stages, conflict, decisions

The thread running through everything

- **Who you are** (personality) shapes **how you relate** (trust, fit) and **whom you know** (networks).
- Your **power & status** decide whether you can speak up and be heard; **psychological safety** decides whether others will.
- **Negotiation and difficult conversations** are how interests and disagreements get resolved.
- In **teams**, all of it plays out together: roles, stages, conflict, decisions and synergy.

? Self-Quiz: Test Yourself

Cover the right column, answer aloud, then check. Repeat what you miss.

Question	Answer
What are the Big Five traits?	Openness, Conscientiousness, Extraversion, Agreeableness, Neuroticism (OCEAN)
Which Big Five traits do entrepreneurs score higher / lower on than managers?	Higher: Conscientiousness, Openness. Lower: Neuroticism, Agreeableness
What do E, V, L, N stand for and which are constructive?	Exit, Voice, Loyalty, Neglect. Voice and Loyalty are constructive; Exit and Neglect destructive
Which fit type correlates most with job satisfaction?	Person-Job fit (0.56)
Define interpersonal trust.	The willingness of a party to be vulnerable
Dense vs sparse network: which gives creativity and informal power?	Sparse, diverse network with brokerage (Network B)
What are the three properties that maximise shared activities?	Passion, Interdependence, Stakes
Name the two main reasons people don't speak up.	Fear and Futility
What is psychological safety?	A shared belief that it's OK to take risks, voice concerns, ask questions and admit mistakes without negative consequences
Single-loop vs double-loop learning?	Single: fix error within existing assumptions. Double: question the assumptions that produced the error
Issue vs position vs interest?	Issue = what is negotiated; position = what they say they want; interest = why they want it
What do you do when an issue is high importance to you, low to them?	Protect it and seek compensation
Four antecedents of conflict?	Goal incompatibility, differentiation, task interdependence, limited resources
Two groups of power sources?	Positional (coercive, reward, legitimate) and personal (expert, referent, information, relational)
Core aspects of workplace status?	Respect, prominence, prestige
Push vs pull status?	Push raises my status (dominance, competing, exclusion, criticism); pull elevates others (collaboration, support, inclusion, compliments, listening)
What is naive realism?	Believing you're objective and that those who disagree lack information or intelligence
Spell out HEAR.	Hedge your claims, Emphasise agreement, Acknowledge other perspectives, Reframe to the positive
Which Belbin role questions assumptions and drives the team but can bully?	Shaper (bullying is non-allowable)
Allowable vs non-allowable weakness?	Allowable: tolerable, manage it. Non-allowable: not acceptable, e.g. a Plant forgetting the meeting
Order of Tuckman's stages?	Forming, Storming, Norming, Performing, Adjourning
What is the punctuated equilibrium model?	Long periods of stability broken by short bursts of revolutionary change
Which conflict type is linked with better decision quality?	Task conflict (relationship, status and process conflict hurt)

Question	Answer
Define synergy and process loss.	Synergy: team does better than any individual. Process loss: potential productivity lost to group dynamics
Abilene Paradox vs groupthink?	Groupthink: overlooking problems to reach consensus. Abilene: going along with a decision no one actually wants to avoid rocking the boat
What is the common knowledge effect and its fix?	Spending time on shared info. Fix: ask who knows what, suspend judgement, surface unshared information

Study plan for retention

- **Day 0:** read the guide once; do the quiz.
- **Day 1:** reread only Big Idea + Memory Hook boxes; redo missed quiz items.
- **Day 3 and Day 7:** redraw the Concept Map and the Cheat Sheet from memory, then check.
- *Note: Memory Hooks and the quiz were added to help recall; all other content is from your IGP slides.*
