

1. PESTEL ANALYSIS						MACRO-ENVIRONMENT DIAGNOSTIC
P • Political Tariffs, trade barriers, tax policy, labor laws, geopolitical stability.	E • Economic Interest rates, inflation, FX rates, GDP cycle, disposable income.	S • Social Demographics, lifestyle trends, cultural shifts, consumer attitudes.	T • Tech R&D incentives, automation, digital infra, IP moats.	E • Environ Carbon targets, resource access, climate compliance.	L • Legal Antitrust, consumer privacy, employment regulations.	
Use cases: Assessing external macro risks; evaluating country or market entry conditions; long-term scenario planning.						

2. PORTER'S FIVE FORCES			INDUSTRY ATTRACTIVENESS & COMPETITIVE DYNAMICS
		THREAT OF NEW ENTRANTS (Barriers to Entry) - High economies of scale and steep capital requirements - Strong product differentiation and brand loyalty barriers - Restricted access to primary distribution and supplier channels - Cost advantages independent of scale (patents, learning curve) - Government regulations, licensing policies, and subsidies	
RELATIONSHIP WITH SUPPLIERS - Fewer substitutable inputs available in the market - Industry is not a key revenue generator for suppliers - Supplier product is critical to buyer quality/operations - High switching costs to move between alternative suppliers - Credible threat of forward integration by supplier group	RIVALRY AMONG COMPETITORS - Numerous or equally balanced competitors in the space - Slow industry growth driving fierce zero-sum share battles - High fixed or storage costs forcing price discounting - Undifferentiated products with minimal buyer switching friction - High strategic exit barriers keeping unprofitable firms in market	RELATIONSHIP WITH BUYERS - Buyer concentration or large purchases as % of seller volume - Standardized or undifferentiated industry offerings - Low customer switching costs to rival products or brands - Credible threat of backward integration by buyer groups - Industry's product has low impact on buyer's end-product quality	
		THREAT OF SUBSTITUTE PRODUCTS - Substitutes offer superior price-performance trade-offs - Produced by high-margin industries willing to cross-subsidize - Low buyer switching costs to adopt alternative product types - Emerging technology shifts rendering existing solutions obsolete - Consumer propensity and willingness to substitute increases	
Use cases: Assessing industry profitability and pricing power; M&A due diligence; defending core competitive moats.			

3. SWOT MATRIX		INTERNAL / EXTERNAL • FACILITATIVE / PROHIBITIVE
Strengths (Internal • Facilitative) - Factors providing a competitive advantage to the company against competitors - Ex: Loyal customer base, strong brand, skilled employees, proprietary tech	Weaknesses (Internal • Prohibitive) - Factors resisting a company against operating at its optimum level in the market - Ex: Lack of capital, high leverage, higher attrition, weaker brand image	
Opportunities (External • Facilitative) - External factors favorable for the company to build a sustainable advantage - Ex: Shift in corporate taxation, falling RM prices, market trends, tech	Threats (External • Prohibitive) - External factors which can potentially harm company profitability or operations - Ex: Increasing competition, natural calamities, limited labor supply, rules	
Use cases: Strategic positioning audits; brainstorming corporate turnaround plans; synthesizing internal vs external factors.		

4. CORE MARKETING FRAMEWORKS (5C'S • 4P'S • 4A'S)			STRATEGIC CONTEXT • TACTICAL EXECUTION • CUSTOMER ADOPTION
5C'S OF MARKETING Company: Who are you? Products, channels, value chain, capabilities. Customers: Who are you selling to? Segments, needs, wants, CLV. Competitors: Who is in your way? Direct/indirect rivals, strategies. Collaborators: Who are you working with? Vendors, suppliers, partners. Context: What are current conditions? Climate via SWOT & PESTEL. Use cases: Diagnosing market landscapes; pre-launch positioning.	4P'S OF MARKETING Product: Need item; design, features, quality, range, packaging. Place: Delivery channels; distribution, franchising, logistics. Price: Amount paid; strategy, payment terms, discounts. Promotion: Communications; channel mix, ads, sales force, PR. Use cases: Planning GTM strategies; solving sales and pricing issues.	4A'S OF MARKETING Awareness: Product Knowledge & Brand Recognition. Affordability: Economic (disposable income) & Psychological (WTP). Accessability: Availability (stock depth) & Convenience (friction). Acceptability: Functional (performance) & Psychological (appeal). Use cases: Customer adoption; diagnosing market reach or penetration friction.	

5. MARKET SIZING: TAM / SAM / SOM

[TAM] Total Addressable Market 100% of theoretical demand or absolute market penetration without constraints. Formula: TAM = Total Potential Customers × ACV	[SAM] Serviceable Available Market Share of TAM targeted by current product specs, distribution channels & geography. Formula: SAM = Target Customers × ACV = TAM × % Segment Fit	[SOM] Serviceable Obtainable Market Realistic volume captured in 1-3 years (constrained by CAC, capacity & capital). Formula: SOM = SAM × Target Market Share %
--	---	---

Use cases: Sizing commercial opportunity; validating financial projections; investor pitch deck valuation.

ADDRESSABLE DEMAND HIERARCHY & CALCULATIONS

5. MARKET SIZING: TAM / SAM / SOM

ADDRESSABLE DEMAND HIERARCHY & CALCULATIONS

[TAM] Total Addressable Market 100% of theoretical demand or absolute market penetration without constraints. Formula: TAM = Total Potential Customers × ACV	[SAM] Serviceable Available Market Share of TAM targeted by current product specs, distribution channels & geography. Formula: SAM = Target Customers × ACV = TAM × % Segment Fit	[SOM] Serviceable Obtainable Market Realistic volume captured in 1-3 years (constrained by CAC, capacity & capital). Formula: SOM = SAM × Target Market Share %
--	---	---

Use cases: Sizing commercial opportunity; validating financial projections; investor pitch deck valuation.

6. ANSOFF MATRIX (PRODUCT / MARKET EXPANSION GRID)		GROWTH STRATEGY VECTOR ANALYSIS
Market Penetration (Existing Market / Existing Product) - Least risky relatively among all strategic growth options - Firms focus on increasing marketing efforts and promotional spend - Decreasing prices to attract newer customers from competitors - Acquiring a direct competitor operating in the same market	Market Development (New Market / Existing Product) - Does not require significant R&D or product development investment - Firms cater to a new demographic, customer profile, or use case - Geographic expansion: enter a new domestic territory or foreign market - Leverage existing operational core through new distribution channels	
Product Development (Existing Market / New Product) - Requires investments in R&D to develop altogether new products - Target existing customer base with complementary product lines - Firms may acquire rights/licenses to produce and sell another firm's products - High brand trust used to cross-sell new technological offerings	Diversification (New Market / New Product) - It is the riskiest strategic growth proposition - Requires simultaneous product development and market creation Related Diversification: Leverage existing synergies & supply chains Unrelated Diversification: Move into entirely new, uncorrelated industries	

Use cases: Structuring corporate growth trajectories; evaluating organic vs. inorganic expansion risks.

7. BCG MATRIX (GROWTH-SHARE MATRIX)		PORTFOLIO CASH ALLOCATION & COST STRUCTURES
★ Stars (High Growth / High Market Share) - Market-leading position in rapidly expanding industry - Generate large cash flows, but require heavy capital reinvestment - Firms must invest heavily to defend leadership and turn them into Cash Cows	? Question Marks (High Growth / Low Market Share) - Operating in high-growth markets with weak market penetration - Companies need to take a decisive call: invest heavily to convert to Stars - Discard as Dogs if no sustainable long-term potential from company standpoint	
§ Cash Cows (Low Growth / High Market Share) - Established market leaders in mature, low-growth industries - Do not require heavy reinvestments; generate sustained surplus cash flow - Needs to be milked properly to fund high-growth Stars and Question Marks	✗ Dogs (Low Growth / Low Market Share) - Weak market position in saturated, low-growth environments - Deliver weak or sustained low cash flows; will never become Stars - Companies should liquidate, harvest residual cash, or divest entirely	

Use cases: Multi-business unit capital allocation; portfolio restructuring; cost-structure analysis.

7. BCG MATRIX (GROWTH-SHARE MATRIX)		PORTFOLIO CASH ALLOCATION & COST STRUCTURES
